

Project Abstract (mandatory)

Under this heading, briefly describe the project to convey the abstract idea of the project using 250 to 300 words. Distribute paragraphs text evenly between both margins to give the document a clean and crisp look, and this task can be performed by using justify paragraph option in MS word.

2 Introduction (mandatory)

This section will expand the title quoted for the project by explaining the background to the work you propose and the objectives you expect to achieve. A project title often will do little more than identify a broad area within which you will work: the accompanying description must elaborate on this, giving details of specific goals to be achieved and precise characterizations of the methods used in the process. You should identify the main sub-tasks that make up your complete project and outline the algorithms or techniques to be adopted in completing them. A project description should give criteria that can be used at the end of the year to test whether you have achieved your goals and should back this up by explaining what form of evidence to this effect you expect to include in your dissertation.

3 Success Criterion

Similarly, a proposal must specify what it means for the project to be a success. It is advisable to choose a reasonably modest but verifiable success criterion which you are as certain as possible can be met; this means that your dissertation can claim your project not only satisfies the success criterion but potentially exceeds it. Projects that do not satisfy the success criterion are, as in real life, liable to be seen as failures to some extent.

Success is the way to reach the defined objectives of your project if it is according to the project proposal and satisfies all the goals and objectives listed in the document. Success requires the acceptance of the project by the supervisor and satisfaction of the client if it is other than your primary supervisor.

4 Related work (mandatory)

- 5 The main reasons for using information from external sources are either to complement the contents of the work with relevant data or to provide a different opinion on the issue stated. In both cases, it means adding credibility to the project, making it look more trustworthy and complete. The author should create an analytical review of the previous scientific works on the topic or explore related development. The student has to provide the historical background and inform the reader about current achievements in research/development. Using

only proven credible sources from journals, conferences, and books accepted in academic circles is vital. All the used sources have to be appropriately cited through the text. The bibliography is situated at the end of the paper. It should follow the provided format and display sources in alphabetical order. It is necessary to study the structure of such work to write a strong final year project proposal. Moreover, a clear scheme will make a formal proposal easier to read.
